L05

LED In-grade

Parts
L05 Back Box
LED trim x 1
Waterproof wire nut x 2
Lubrication grease — Included

Remove flange, install wiring and conduit. Refer to applicable wiring diagram.

Replace flange. Ensure all gaskets are in place and knockouts are plugged.

DO NOT LET CONCRETE ENTER BOX.

1) Position electrical box. Recommended distance is 1/4" (6mm) maximum from top of poured concrete to the flange. Use mounting tabs or optional mounting hardware to level box.

2) After concrete has cured, crack concrete above flange and remove plastic cap using a corkscrew or similar tool.

3) The power to the remote driver must be off while wiring LED fixtures to drivers. Connect fixture leads to box wiring using supplied waterproof wire nuts.

4) APPLY LUBRICATION GREASE to bottom of trim on o-rings and inside of flange, for proper insertion and removal of trim. Inside of flange must be clean before applying lubrication grease.

5) With a twisting back and forth motion insert trim into flange.

6) If fixture has an angle bracket, make sure beam is lined up in desired direction when inserting the trim.
